

ENE A green

Original Air-Oil cooler for press.

ENEAgreen is the first cooling system for presses oil in ceramic industry to use the variable ventilation technology.

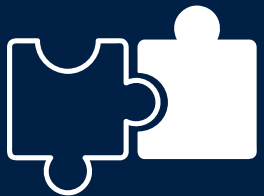

Specially shaped fins and oil radiator circuit provide **high performance**.

1

2

Higher energy saving thanks to variable ventilation controlled by the oil temperature.

Easier and compact, completely assembled and ready-to-install.

3

4

Oil temperature is kept **constant** at any external condition.

Quieter thanks to air flow and **variable ventilation**.

5

6

Maintenance free.

No water needed!

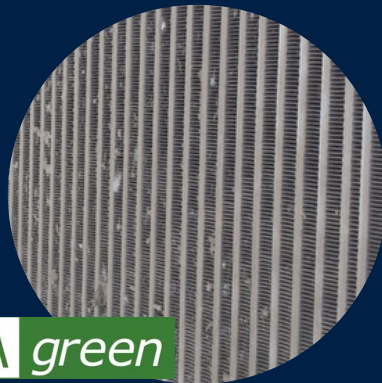

Water is no longer needed to cool the press oil temperature, this means that there are **NO PERIODIC STOPPAGE FOR DUCT CLEANING.**

7

8

Self-cleaning programmable fans inversion maintains the radiator dust free at best efficiency.
