

CONTROL FLUX

CONTROL FLUX Stick to the target

CONTROL FLUX is a device to automatically control and keep constant the glaze supplied by the pump towards the bell, allowing to optimize the production. Its usage allows the elimination of bubbles in the glaze, ensuring high-quality production performance. CONTROL FLUX paired with the bell has brought back in vogue this application for the production of marble effect tiles.

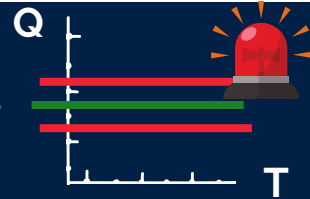

It eliminates weighing errors maintaining constant the quantity of glaze and alerts the operator in case of variances beyond the threshold.

1

2

Optimal usage threshold preset.

It simplifies the procedure and reduces the operator intervention time.

3

4

Less parts in contact with glaze, quick and easy washing with greater safety for the operator during these phases.

It allows to parameterize the application with tangible and settable data that enable traceability and repeatability.
