

BELTKEEPER

BELTKEEPER

Belt cover for vela and campana coaters

Beltkeeper is a belt cover for vela and campana coaters.

Its main function is to avoid glaze come into direct contact with the belts below.

This permits to simplify the operator's activities on the line, with a positive impact on the production process; important improvements can be seen on the production quality and on the reduction of issues related to glaze and rollers.

Keep the glaze quality at its best and reduce the waste.

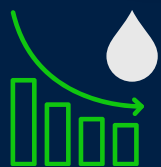

No formation of glaze marks on the bottom surface of tiles means less problems of dirty kiln rollers.

1

2

Considerable reduction of glaze contamination and impurity at the time of belts scraping.

Reduction in glaze waste.

3

4

Reduction of the time required to the operator to keep belts clean.

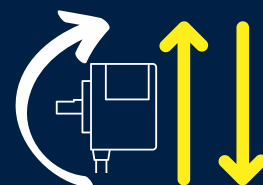

Stand-alone device, easy to install.

5

6

Self-regulating to glazing line speed variation.

Beltkeeper can be used with both applications VELA and CAMPANA.

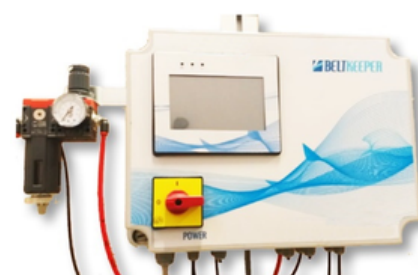

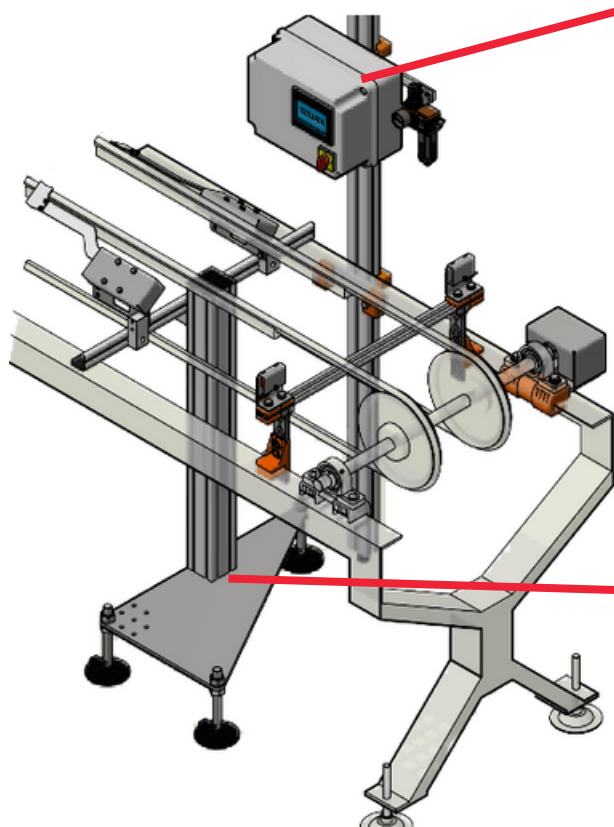

7

8

Compliant with 4.0 industry.

Beltkeeper is the perfect solution to your problems.

**User-friendly
programmable parameters.**

**Independent support to be
easily installed without any
modification of the line.**
